

Introduction to Nonsmooth Analysis

Vladimir M. Miklyukov
(Volgograd State University, RUSSIA)

Contents

Chapter 1 Instrumentarium

1.1 Coverings in \mathbf{R}^n	12
1.1.1 Coverings with balls	12
1.1.2 Besikovitch and Vitali theorems	17
1.1.3 Minkowski dimension	18
1.2 Hausdorff measure and dimension	18
1.2.1 Definitions and examples	19
1.2.2 Logarithmic measure	19
1.2.3 Hausdorff α -measure	20
1.2.4 Fractals	21
1.3 Measurable sets and functions	21
1.3.1 Measurable sets	21
1.3.2 Denumerable additive functions of sets	22
1.3.3 Measurable functions	26
1.3.4 Egoroff and Lusin theorems	26
1.3.5 Semicontinuity and measurability	27
1.3.6 Category, points of density	28
1.4 Lusin N -property	29
1.4.1 Hölder and Lipschitz conditions	29
1.4.2 N -property	30
1.5 Iterated integration	32
1.5.1 Fubini theorem	32
1.5.2 Tonelli theorem	33
1.6 Rectifiability and perimeter	34
1.6.1 Rectifiable sets	34
1.6.2 Totally m -nonrectifiable sets	35
1.6.3 Perimeter and approximate normal	35

Chapter 2 Lipschitz functions

2.1 Distortion of measure and dimension	37
2.2 Differential	38
2.3 Stepanoff theorem	38
2.4 Clarke derivative	43
2.4.1 Norm and co-norm of a matrix	43
2.4.2 Definition of Clarke derivative	46
2.4.3 Mean value theorem	49
2.5 Kronrod - Federer formula.	51
2.5.1 Jacobi matrix ($f'(a)$)	51
2.5.2 Change of variables	52
2.6 Generalized Gauss - Ostrogradskii formula	58
2.6.1 Krofton formula	58
2.6.2 Gauss - Ostrogradskii formula for Lipschitz functions . .	59

Chapter 3 Functions with generalized derivatives

3.1 ACL^p -functions	61
3.1.1 Generalized derivatives	61
3.1.2 Approximation	63
3.1.3 Chain rule	65
3.2 "Length and area" principle	66
3.2.1 Modulus version of the principle	66
3.2.2 An estimate of spherical oscillation	72
3.2.3 Monotone functions	74
3.2.4 "Length and area" principle on surfaces	78
3.3 Remarks on ACL^Φ -functions	81
3.4 Stabilization close to boundary	84
3.4.1 p -Capacity	84
3.4.2 Admissible speed of stabilization	85
3.4.3 Proof of Theorem 3.4.1	86
3.5 Boundary properties of monotone maps	94
3.5.1 The set \bar{B}_0	94
3.5.2 Limit sets along cones	95
3.5.3 Existence condition of angle boundary value . .	98
3.5.4 Capacity characteristic of the set S_V	100

3.5.5 Plane case	103
----------------------------	-----

Chapter 4 Piecewise smooth maps 104

4.1 Some general topological facts	104
4.1.1 Kudryavcev's theorems	104
4.1.2 Generalizations	106
4.1.3 Chernavskii theorem	107
4.2 Piecewise-smooth ⁺ maps	111
4.2.1 Definitions	111
4.2.2 Geometrical sense of $J(a, f^+)$	112
4.2.3 A condition of local homeomorphism	114
4.2.4 Tests of global homeomorphism	114
4.2.5 Accompanying results	116

Chapter 5 Lipschitz mappings

5.1 Inverse function theorem	118
5.1.1 Inverse mappings	118
5.1.2 Open mappings theorem	122
5.1.3 Locally Lipschitz maps	123
5.1.4 Hadamard and Efimov theorems	124
5.2 Distortion under bi-Lipschitz maps	133
5.2.1 To statement of problems	133
5.2.2 Dilatation	134
5.2.3 Isothermal coordinates	135
5.2.4 Quasi-isometry	136
5.2.5 Conditions of quasi-isometry	138
5.2.6 Distortion and quasi-convexity	140
5.2.7 Distortion of triangles	144
5.2.8 Conditions of orientation preservation	146
5.3 Implicit functions	148
5.3.1 Implicit function theorem	148
5.3.2 Proof of Theorem 5.3.1	150
5.3.3 Piecewise-smooth ⁺ version of the theorem	154
5.3.4 Proof of Theorem 5.3.2	155
5.3.5 Two examples to Theorem 5.3.2	157
5.4 Critical points and critical values	158
5.4.1 Contingent and its property	159

5.4.2 Morse - Sard theorems	161
5.4.3 Nonsmooth maps	165

Chapter 6 Extension of Lipschitz functions

6.1 Whitney and Kirszbraun theorems	167
6.1.1 C^1 -Extension	167
6.1.2 An approximation theorem	168
6.1.3 <i>Lip</i> -Extension	169
6.2 Extension under restrictions to gradient	170
6.2.1 Variational problem	170
6.2.2 Extension problems	172
6.2.3 Functions in pseudo-metric spaces	173
6.2.4 Finsler's metric	183
6.2.5 Comparison of the boundary $\partial\Omega_\rho$ with the Euclidean boundary	191
6.2.6 Conditions of p -uniformity of domains	199

Chapter 7 ACL^n -Homeomorphisms

7.1 Surfaces	204
7.2 Relative distance I	206
7.3 Boundary elements and prime ends of domains	209
7.3.1 Boundary elements	209
7.3.2 Prime ends	210
7.3.3 Domains with compact supplement	211
7.4 Distortion of the relative distance I	212
7.5 Nonexistent examples of ACL^n -homeomorphisms	216
7.5.1 Domains with noncompact supplements	216
7.5.2 Domains with nonaccessible prime ends	217
7.5.3 Classification of prime ends	221
7.5.4 Domains with prime ends of the fifth type	222
7.6 Families of ACL^n -homeomorphisms	225
7.6.1 Characteristics of quasiconformality	226
7.6.2 Classes of maps	229
7.6.3 Relative distance II	231
7.6.4 Two-sided estimate of relative distance II	235
7.6.5 Corollaries: distortion of the Euclidean distance	248

7.7 Carathéodory - Suvorov theorem on kernel convergence . . .	251
7.7.1 Convergence to the kernel of sequences of domains . . .	251
7.7.2 Equicontinuity and uniform openness	253
7.7.3 Carathéodory - Suvorov theorem	254
7.7.4 Another normalization	258
7.8 Ovchinnikov theorem	260
7.8.1 Low estimate of Dirichlet integral	260
7.8.2 Two examples of impossibility of maps	264

Chapter 8 Generalized solutions

8.1 Classes of nonlinear equations	266
8.1.1 Solutions and subsolutions	266
8.1.2 p -Harmonic functions	268
8.1.3 Minimal surface equation	275
8.1.4 Gas dynamics equation	277
8.2 Maximum principle for difference of solutions	278
8.2.1 Formulations of main results	278
8.2.2 Proof of Theorem 8.2.1	280
8.3 Three spheres theorem for p -harmonic functions . . .	286
8.3.1 Hadamard theorem	286
8.3.2 Main results	287
8.3.3 Proof of Theorem 8.3.2	288
8.3.4 Proofs of corollaries	296

Chapter 9 Alternative definition of the generalization solution

9.1 Ideal flows in narrow and long strips	298
9.1.1 Stagnation zones	298
9.1.2 Sizes of stagnation zones	299
9.1.3 Laplace - Beltrami equation	302
9.1.4 Examples of metrics	304
9.1.5 Estimates of oscillations	308
9.1.6 Energetic estimates	313
9.1.7 Proofs of Theorems 9.1.1 and 9.1.2	322
9.2 Absolute opaque boundary	324
9.2.1 Stagnation zones close opaque boundary . . .	325
9.2.2 Preparation results	328

9.2.3 Proof of Theorem 9.2.1	339
9.2.4 Case of the Euclidean metric	341
9.3 An condition of solution nontriviality on stagnation zones . . .	346
9.3.1 Statement of the problem	346
9.3.2 Classes of equations	346
9.3.3 F -Capacity	348
9.3.4 Main theorem	349
9.3.5 Corollaries	355

Chapter 10 Solutions on spherical cones

10.1 n -Harmonic functions	358
10.1.1 Main results	358
10.1.2 Lipschitz solutions on manifolds	361
10.2 Properties of solutions	369
10.2.1 Behavior close to singular points	369
10.2.2 Theorem of Liouville type	372
10.2.3 Carleman's method	377
10.2.4 Arima inequality	385
10.3 Proof of Wiman theorem	386
10.4 Proof of Arima theorem	387
Bibliography	390
Author index	411
Subject index	417
